DETAILED ACTION

Election/Restrictions

Applicant's election of claims 1-5 in the reply filed on April 08, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,011,239 to Singh et al in view of USPN 4,691,241 to Tomohisa et al and in view of USPN 5,622,567 to Kojima et al.

Application/Control Number: 10/646,818

Page 3

Art Unit: 1725

Singh et al show (Figure 7) application of laser energy to a thin plate head suspension element in order to bend the suspension slightly. Tomohisa et al describe (Summary) a laser beam is "brought to the galvano mirror to be polarized." Kojima et al describe (column 31, paragraph 1) "Focal length of the condenser lens is long, and therefore the sizes of the laser beams focused on the entire surface of the target are approximately the same." The use of well known beam control described by Tomohisa et al and Kojima et al in the adjustment method of Singh et al would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because laser apparatus beam energy applied to the work can be finely controlled and the energy control described by Singh et al (Abstract) can be optimized. With respect to claims 4 and 5, assigning map regions or feature areas on the workpiece would have been obvious in order to easily identify locations for beam application.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,011,239 to Singh et al in view of USPN 4,691,241 to Tomohisa et al and in view of USPN 5,622,567 to Kojima et al as applied to claims 1 and 2 above, and further in view of USPN 6,086,773 to Dufresne et al. Dufresne et al describe well known shaping of a beam to impart particular "the precise pattern needed" and the use thereof would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the use of known preselected shapes speeds beam application and speeds production.

Art Unit: 1725

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel M. Heinrich whose telephone number is 571-272-1175. The examiner can normally be reached on M-F. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
